

I would like to express my EXTREME disapproval of this intended action. Amateur radio operators depend on this type of digital data transmission to accurately relay critical lifesaving information in times of disaster or communications disruption. I PRAY it is not a member of your family that will be waiting on an operating room table for a critical supply, service or piece of information that could save their life. Try using voice communications to convey a 32+ character part number for a supply to another hospital, supply company or organization. I BEG you to rule against this motion.
